

Macroeconomic Country Analysis

Denmark — Norway — Sweden

Penn World Table 11.00 · FRED · Solow Growth Model

Spring 2026

Denmark

Economic Data & Solow Model

Denmark – GDP per Capita

Trend growth $\approx 1.0\%$ p.a. since 2000 (1995 Q1 – 2024 Q4)

Denmark: Real GDP per Capita (constant 2015 DKK)

Indicator

Value

Sample	1995–2024
Trend growth	$\approx 1.0\%$ p.a.
GFC drop	$\approx -7\%$
COVID drop	$\approx -5\%$

- Sustained convergence to high-income level
- Clear 2008–09 recession trough
- Rapid post-COVID recovery

Denmark – Business Cycles

HP-filtered output gap ($\lambda = 1600$) · Unemployment & Inflation

- Output gap autocorrelation $\rho \approx 0.84$ — persistent cycles
- Unemployment $\approx 5\%$ average; CPI trend $\approx 1.8\%$ since 2000
- Strong counter-cyclical unemployment; GFC spike to $\sim 8\%$

Denmark – Stylised Facts

SF1–SF7 from Kaldor; cross-country GDP comparison

- Broadly confirms SF1–SF7: stable growth, balanced factor shares ($\alpha \approx 0.37$)
- Labour share $\approx 63\%$; capital share relatively stable — consistent with SF6/SF7

Denmark – Solow Model

PWT calibration 2000–2019; savings shock $s \uparrow$

Denmark - General Solow Model: 100-Period Simulation
Shock at t=20: s increases from 0.263 to 0.313 (+5 pp)

Parameter

Value

α 0.373

s 0.248

δ 0.044

n 0.003

g 0.013

$\tilde{k}^*$ 5.82

$\tilde{y}^*$ 2.29

- $s < \alpha$: below Golden Rule
- Savings $\uparrow \Rightarrow \tilde{c}^* \uparrow$ (welfare gain)
- Smooth transition to new SS

Norway

Oil Economy & Solow Anomalies

Norway – GDP per Capita

Trend growth $\approx 1.0\%$ p.a. since 2000 (1978 Q1 – 2024 Q4)

Indicator

Value

Sample	1978–2024
Trend growth	$\approx 1.0\%$ p.a.
Oil shock 2015–16	mild dip
COVID drop	$\approx -3\%$

- Highest GDP/capita of three countries
- 1987–89 banking crisis trough
- Oil wealth buffers recessions

Norway – Business Cycles

HP-filtered output gap · lowest output volatility ($\sigma = 0.013$)

- Output autocorrelation $\rho \approx 0.60$ — moderate persistence
- Unemployment $\approx 3.7\%$ avg since 2000 — lowest of three countries
- CPI $\approx 2.5\%$ since 2000; oil fund stabilises fiscal cycle

Norway – Oil Anomalies

Factor shares violate SF6/SF7; $\alpha = 0.505$ driven by oil rents

Norway: Stylized Facts 6 & 7 - Stable Factor Shares (PWT 11.00)

- Labour share swings **38%–65%** with oil price cycle — violates SF6/SF7
- Norway well above peer-group trajectory: oil-wealth premium

Norway – Solow Model

PWT calibration 2000–2019; Oil Fund fiscal rule shock

Norway - General Solow Model: 100-Period Simulation
Shock at t=20: s increases from 0.230 to 0.280 (+5 pp)

Parameter

Value

α 0.505

s 0.310

δ 0.044

n 0.010

g -0.006

$\tilde{k}^*$ 4.40

$\tilde{y}^*$ 2.10

- $g < 0$: maturing oil fields
- $\alpha > 0.5$: oil-inflated capital share
- Shock: reinvest more via GPFG ($s \downarrow$)

Sweden

ERM Crisis Legacy & High Volatility

Sweden – GDP per Capita

Trend growth $\approx 1.25\%$ p.a. since 2000 (1993 Q1 – 2024 Q4)

Indicator	Value
Sample	1993–2024
Trend growth	$\approx 1.25\%$ p.a.
GFC drop	$\approx -7\%$
COVID drop	$\approx -8\%$

- Fastest-growing of the three countries
- Deepest COVID contraction in sample
- Strong post-GFC V-shaped recovery

Sweden – Business Cycles

Highest output volatility ($\sigma = 0.018$) · Unemployment & Inflation

- Output autocorrelation $\rho \approx 0.67$; **highest** output std dev ($\sigma = 0.018$)
- Unemployment peaked $\sim 10\%$ post-1993 ERM crisis, declined to $\sim 6\%$
- CPI $\approx 1.5\%$ since 2000 — below 2% target; Riksbank chronic undershoot

Sweden – Solow Model

PWT calibration 2000–2019; savings shock

Sweden - General Solow Model: 100-Period Simulation
Shock at t=20: s increases from 0.259 to 0.309 (+5 pp)

Parameter	Value
α	0.360
s	0.258
δ	0.046
n	0.007
g	0.013
$\tilde{k}^*$	5.50
$\tilde{y}^*$	2.22

- $s < \alpha$: below Golden Rule
- Savings $\uparrow \Rightarrow \tilde{c}^* \uparrow$ (welfare gain)
- Highest TFP growth of three countries

Cross-Country Comparison

Denmark · Norway · Sweden

Comparison – GDP per Capita & Growth

Common sample 1993 Q1 – 2024 Q4

Comparison: Real GDP per Capita

Comparison: Economic Growth

- Norway highest level — oil wealth premium
- Sweden fastest trend growth ($\approx 1.25\%$); Denmark & Norway $\approx 1.0\%$
- All three show synchronised GFC 2008–09 and COVID 2020 dips

Comparison – Labour Market & Inflation

- Norway lowest unemployment ($\approx 3.7\%$); Sweden highest ($\approx 6\%$) — ERM legacy
- Inflation broadly converged since 2000; post-2021 spike common to all three
- Norway oil fund dampens domestic demand swings; Sweden more exposed

Comparison – Solow Model

Cross-country Solow comparison: parameters & steady states

Solow Model Parameters: Cross-Country Comparison (2000-2019 average)

Solow Model: Normalised Transitional Dynamics after +5 pp Savings Shock

- Norway outlier: $\alpha = 0.505$, $g < 0$ — oil distorts both capital share and TFP
- Denmark & Sweden: similar $\alpha \approx 0.37$, $g \approx 1.3\%$, both below Golden Rule
- All three: $s < \alpha \Rightarrow$ savings increase raises steady-state consumption
